FLUIDS
DRIVEN TO OUTPERFORM

DRIVEN TO OUTPERFORM

IN THE WORLD'S MOST CHALLENGING
OILFIELD ENVIRONMENTS

NEWPARK HELPS CUSTOMERS ACHIEVE HIGH-PERFORMANCE.

With constant innovation, we're updating the ways of working with unrivaled performance. The result is more efficient, reliable, safe and sustainable practices.

From superior fluids products to award-winning fluids service, everything we do is driven to outperform. Newpark fluids are changing the way the industry thinks about what's possible and how to achieve it.

NEW BREADTH

Newpark's quality and service is expanding with a new range of high-performance drilling, completion, stimulation, and deepwater fluids and services.

NEW DEPTHS

Continuing to set industry standards with fluids technologies and services worldwide, Newpark enables customers to reach new depths in offshore performance.

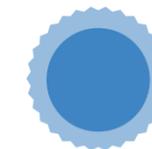

NEW AGILITY

With new and improved state-of-the-art testing, modeling and service offerings, Newpark helps oil and gas companies tailor solutions to conquer the most challenging environments with faster, safer and cleaner results—onshore and off.

SHELL WELL SERVICES SUPPLIER OF THE YEAR

Shell Award 2018 after working together for two and a half years on a long-duration well.

#1 IN HSE

EnergyPoint Research ranked Newpark #1 for the seventh straight year in February 2019.

NEW BREADTH

NEW EXPANDED FLUIDS PORTFOLIO

Newpark offers an expanded portfolio that extends beyond drilling fluids. By combining the industry-leading expertise of our team and new approaches in fluid chemistry, Newpark can help customers reach new performance levels and operating efficiencies while working in harmony with the environment—on land and at sea.

DRILLING FLUIDS

Newpark Fluids Systems provide value-added solutions, products and services to drilling operators around the world. Our fluids offer eco-friendly solutions and reduce drilling time.

Our non-aqueous, water-based and specialty drilling fluid solutions include Evolution®, our family of high-performance water-based drilling fluid systems, and Kronos™ synthetic-based invert emulsion system. Each are tailorable for the unique requirements of our customers, across unconventional and deepwater drilling.

By integrating novel technologies into our products and developing new approaches in fluid chemistry, Newpark reaches new performance levels for customers worldwide.

Today, we serve operators across global areas of drilling activity, including the challenging shale gas plays and offshore Gulf of Mexico markets. Our innovative products and best-in-class service culture have earned us strong recognition and awards globally.

COMPLETION FLUIDS

Newpark's completion fluids line includes clear brine fluids and filtration equipment, wellbore cleanup and displacement chemicals, reservoir drill-in fluids and breaker technology, filtration equipment, displacement modelling software and pre-planning/post-analysis displacement laboratory services.

The True™ suite of completion additives includes products designed for wellbore cleanup operations as well as those for viscofying a wide range of clear brine fluids, corrosion inhibition, emulsion and foam prevention and brine reclamation.

Newpark's newly expanded portfolio also includes a family of reservoir drill-in fluids, which are optimized to each individual application for maximum productivity while minimizing costs. The line includes CleanDrill, CleanDrill HD and Resolution systems fluids.

STIMULATION FLUIDS

Newpark's stimulation fluids line, NewStim™, is engineered to safely enhance production from newly completed wells or to re-stimulate production from older wells that may be exhibiting damage.

The Matrix Acid Stimulation Fluids, which range from products for routine treatments to more specialized components, are designed to match the rock type to be stimulated or match the entity impeding reservoir production.

Newpark's Hydraulic Fracturing Fluids are comprised of specialized friction reducers used to design Slickwater fluids as well as natural gelling agents, crosslinkers and breakers engineered to produce linear and higher viscosity fluids that can transport higher proppant loadings compared to standard FR's.

NewSand™ Stable is a non-damaging Chemical Sand Control product used to prevent migration of sand from the producing reservoir. It can be easily added during initial well completion or used to remediate sand production issues in existing wells.

NEW DEPTHS

HIGH-PERFORMANCE IN DEEP WATER

Newpark is strategically positioned to provide safer, faster and cleaner solutions for deepwater.

ENHANCING EFFICIENCIES AND RESULTS OFFSHORE.

KRONOS™

Newpark's Kronos™, synthetic-based system is a versatile deepwater drilling fluid designed to offer tunable performance over a wide range of temperatures and pressures by using a unique set of products for the challenging deepwater environment. By product selection and tuning, the system can be tailored to deliver varying performance characteristics and matched to local market needs.

FLAT RHEOLOGY FORMULATION

Consistent rheological profile over a wide range of temperatures and pressures

LOW-ECD FORMULATION

Designed to minimize ECD spikes through minimization of pressure losses and optimization of flow rates

LOW-END RHEOLOGIES

Efficient hole cleaning and barite suspension

STATE-OF-THE-ART PORT FOURCHON SERVICE FACILITIES

To support offshore demand in the Gulf of Mexico and surrounding region, Newpark's facility in Port Fourchon, Louisiana was built with speed and efficiency in mind.

The facility offers world class capabilities that allow quicker turnaround times offshore, providing increased efficiencies and saving operators valuable time. The plant features a salt monorail system as well as Coriolis meters.

In January 2019, Newpark has further expanded its Port Fourchon capabilities by opening a second facility, which specializes in completion fluids. The new operation includes state-of-the-art quality controls and precision handling systems to meet customer needs safely and efficiently.

Operations at these facilities conform to several recognized management and quality system standards addressing a variety of activities.

NEW AGILITY

A NEW GENERATION OF CUSTOMIZED SOLUTIONS

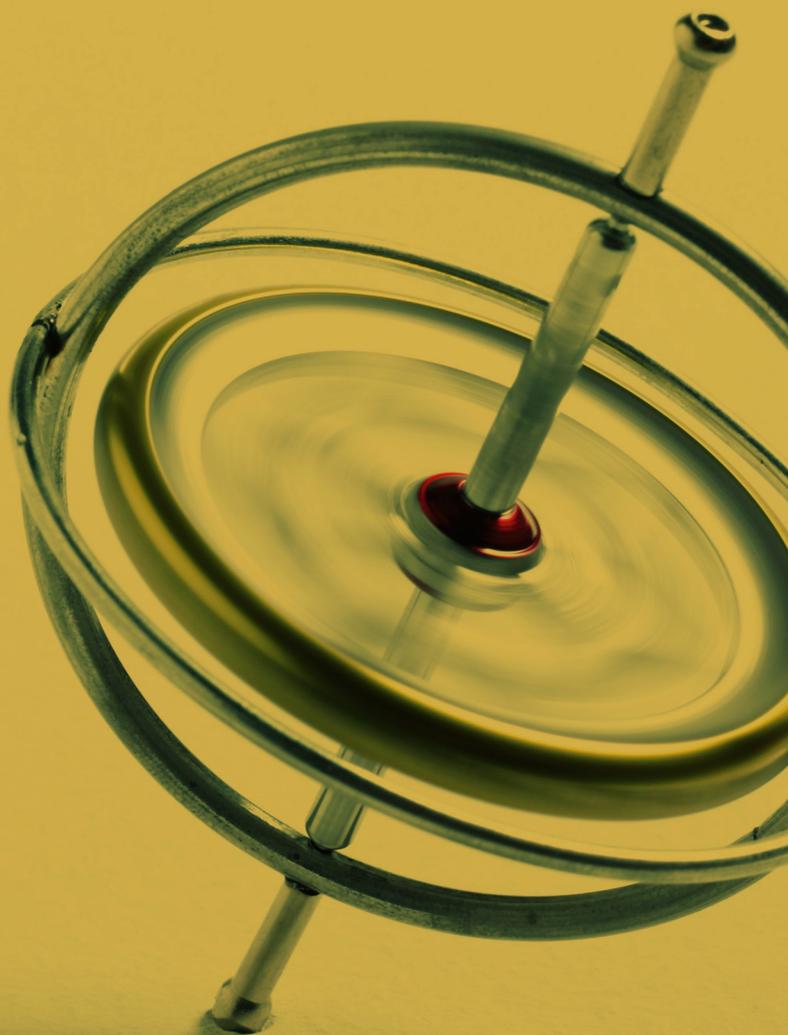

Newpark offers superior technical support for customers through its global engineering team, who have years of experience solely focused on fluids. Partnering with Newpark means receiving special attention to detail on technically complex wells and appropriate solutions for environmental challenges so you can proceed with confidence, safety and speed.

Newpark utilizes the latest technology, including its NEW world-class Wellbore Hydraulics Modeling Software. The technology is comprised of a user-friendly interface that predicts wellbore hydraulics for various drilling scenarios and provides risk-mitigating accuracy for fluid formulations. The software is suitable for both land and offshore HPHT applications.
